Progressive numbness in the left leg

Date of Appointment: 05/06/2025

Specialty: Neurologia

Type of Visit: Urgency/Emergency visit

Responsible Doctor: Dr. Vinicius Mita Xavier

Clinical Record

52-year-old male patient reports numbness and tingling on the lateral aspect of the left leg for 3 days, with progressive worsening. No associated low back pain. Physical exam: reduced sensation in L5, decreased patellar reflex on the left. Impression: Lumbar radiculopathy. Lumbosacral spine MRI requested. Anti-inflammatory prescribed and rest advised. Follow-up after tests for management planning.
